

uComponents

Data types and more for Umbraco

What is uComponents?

uComponents is a collaborative project for creating components for Umbraco.

What are uComponents?

v1 Release

15 Data Types

3 XSLT Extensions

+ a few Helper Utilities

Data Types?

Auto Complete, Dropdown CheckList, Elastic TextBox, File Picker, Image DropDown, Incremental TextBox, Multi-Node Tree Picker, Multiple Dates, Radiobutton List with Images, Related Links with Media, Slider, Styled TextBox, ToggleBox, Unique Property, User Picker.

XSLT Extensions?

CMS – access doc-types, media-types, etc.

Strings – get x number words, strip chars, casing.

XML – string to xml, filtering, random nodes.

Helper Utilities?

PreValue Editors for Data Types

Exception helpers for XSLT Extensions

Data Type helpers

(internal helpers and shared code)

How did it all start?

Who's involved?

Goals and Guidelines

Umbraco v4.5.2+

C# - .NET 3.5

Single deployable assembly

CSS, Images, JavaScript as embedded resources

Use the Umbraco API wherever possible

No AjaxControlToolkit! Use jQuery alternatives

Demonstration

Where can I get it?

Our Umbraco
